

Desktop Computer Papercraft Model

Blue PC set on a yellow board - A4 cut, fold & glue templates

You need

- A4 colour printer, thick paper/card (160-220 g/m2) - or normal paper glued onto cereal-box card
- Scissors or craft knife + ruler, a blunt point (empty pen) to score fold lines
- Glue stick / white PVA glue (or double-sided tape)
- Base: a piece of stiff cardboard or foam board, 38 x 27 cm

Parts list (finished sizes, cm)

01	Base board - 2 yellow sheets + black edge strips	38 x 27
02	PC tower - 2 sheets (piece A + piece B)	6 W x 10.5 D x 13 H
03	Monitor screen box	16 x 10 x 0.8
04	Monitor stand (neck + foot)	neck 6.5 H, foot 7.5 x 4.5
05	Speaker LEFT and 06 Speaker RIGHT	4 W x 5 D x 7.5 H
07	Keyboard + mouse	14 x 5 / 3.2 x 5.8
08	OPTIONAL: RGB speaker fronts (3rd photo style)	glue over speaker fronts

How to build

1. Print every page at 100 %. Measure the 5 cm ruler at the bottom of a page to check the scale.
2. Cut along SOLID lines. Score DASHED lines with a ruler and blunt point, then fold them away from you (printed side stays outside). Grey 'glue' tabs always go INSIDE the model.
3. Close each box: glue the side tab first, then the top and bottom lids. Hold 30 s until the glue grabs.
4. Tip: before closing big boxes (tower, speakers) put a crumpled paper or card inside to keep them firm.
5. Tower: glue piece A tab under the edge of piece B's back face, then piece B's tab inside the front face.
6. Monitor: fold the screen box, glue the neck to the 'glue stand' mark on the back, glue the neck into the centre of the foot. Lean the screen slightly back if you like.
7. Base: glue the 2 yellow sheets side by side on the cardboard (left + right). Wrap the black strips around the cardboard edges. Dotted outlines on the base show where each part stands.
8. Glue all parts on their outlines: speakers, monitor, tower, keyboard, mouse. Done!
